Microsoft dynamics ax 2012 r2 services pdf free download

Total download: 530 in iPhone With Microsoft Outlook, you get all your emails and even your schedules in one place right in your iPhone. Download Back to the details page of Microsoft Outlook 4.31.0 Good news for Microsoft fans using Android devices, as the company's Edge browser can now be downloaded from the Google Play Store. Until early today, Android users could only install the preview version of Microsoft Edge, which happened to get a small update yesterday that added a Dark Theme and password synchronization. Less than 24 hours after that update, Microsoft released the final version of Edge in the Google Play Store. If you haven't used beta build yet, here are a few things that Microsoft Edge can do on Android. First off, it can sync your favorite sites across devices so you can continue reading them from where you left off no matter what device you have with you. It has a QR code reader, voice search feature and the so-called Hub View. On top of that, Microsoft Edge comes with an InPrivate mode that prevents browsing history (history, temporary Internet files, and cookies) from being stored on your device when it is enabled. Of course, Microsoft Edge is available for free and should work on any device running Android 4.4 and up. Try it and maybe you will find it more useful than other browsers with pedigree. Subscribe to our newsletter! Companies could soon have more hosted programs to choose from following a new program from Microsoft that launches initially in Europe this week. The software maker is partnering with managed hosting companies to set up incubation centers that will offer services to software vendors to help them customize their applications and business models to the software-as-a-service (SAAS) model of online applications. The first incubation centers are opening in Europe this week, at NTT Europe Online in the UK and France, and at 7global in the UK. Other incubation centers will follow in Asia and North America in the coming months, Microsoft representatives say. To participate, software vendors must be enrolled in the Microsoft license agreement for the service provider, which allows them to license Microsoft software on a monthly basis to their end-user customers. Microsoft will also help them find a hosting partner and offer discounts on some of its software for the first year. Hosting partners use the Microsoft hosting platform to deliver the applications. The platform provides tools for setting up service-enabled applications, and for tasks such as user provisioning, performance monitoring, and usage tracking. It is the latest effort by Microsoft to take advantage of the software as a service model that is seen as a threat to its applications business and which Microsoft is now gradually starting to embrace. The hosting model, developed Salesforce.com by companies such as Salesforce.com, can help end-users Reduce software installation costs by outsourcing tasks such as patching and upgrade programs. They often have also buy software in smaller intervals. The partnerships are not exclusive, and NTT Europe will continue to offer hosted applications on Linux and other platforms, said Robert Steggle, marketing director for NTT Europe Online. The new program will likely appeal most to smaller software companies, some of which are trying the software as a service model for the first time, Steggle said. The task is a significant one for vendors who have become accustomed to selling software with one-time annual licenses. Changing their licensing model, their sales channel, their commission and their financial structure all to a monthly recurring model is something of a change, Steggle said. To help with the transition, the incubation centers will offer two days of architectural design training and two days of business development training provided jointly by Microsoft and the hosting partner. The fee for the training will be nominal, according to Steggle, because Microsoft and its hosting partners support the services to attract new businesses. NTT Europe is opening its incubation centres in the UK and France this week. It will open additional centers in Spain and Germany, where it also operates if it sees enough demand, Steggle said. The program is primarily focused on helping software vendors to launch their own applications, although they could also provide Microsoft programs such as the hosted versions of Exchange and SharePoint, Microsoft said. Hosted applications are not for everyone, Steggle said, but demand for them is increasing. On our website on Friday, we got ten times as many hits for software-as-a-service as we did for successful hosting, he said. The hosting partner program is called the Microsoft SaaS Incubation Center Program, while the software vendor program is called the Microsoft SaaS On-Ramp Program.
